

3/4" HARVESTERLOK™ FRICTION HUB

Keyless Sprocket System for Most Harvester Applications

HarvesterLok™

The keyless frictional locking device family provides a high capacity, zero-backlash shaft-to-hub or coupling connection by means of a mechanical interference fit. Boasting exceptional concentricity and ability to transmit bending loads, as well as no axial movement during installation, the friction hub circumvents the shortcomings of traditional connection methods like shrink fits and keyways. These advantages also result in reduced shaft material and more lenient tolerances, which directly translates to less maintenance time and cost.

FEATURES

BENEFITS

Uniform Pressure Distribution

• Eliminates distortion and warping

Fittings for Smaller Shafts

• Allows for broader application

Keyless Hub

• Complete axial and radial adjustment, even over existing keyways
• No keyways failures, seize ups or shaft failures because of worn keyway

Hex-head Set Screws

• Simple & quick installation, adjustment, and removal in the field

No Space Between Sprocket and Shaft

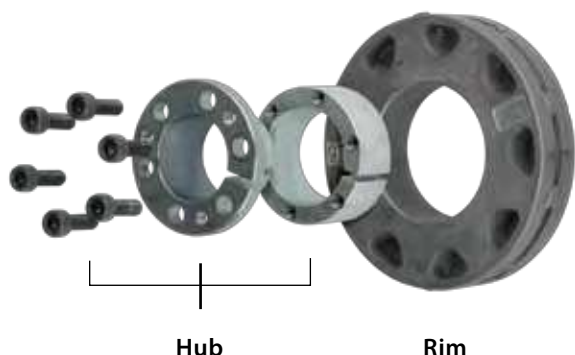

• True zero backlash shaft-to-hub connection

 The sprocket should be aligned to the drive shaft to prevent damage to the chain, bar, and sprocket. Mount the harvester bar to the machine. See the Oregon® Harvester Application Guide for specific information.
